

## **BALL VALVE OPERATION VERIFICATION**

**NOTE: Example pictures show boat out the water, diver may be required if vessel is in the water.**

**Picture 1**

**Straighten the piece of 12ga wire provided**

**Close all ball valves. Using the wire provided, verify how far it can be inserted into thru-hull fitting opening. The wire should only enter approximately 6", See picture #2. If the wire can be inserted all the way as shown in picture #3 then contact Luhrs customer service department immediately.**

**Picture #2**

**With ball valves in the open position verify that the wire can be inserted further than when in the closed position. If wire can not be inserted further than noted with ball valve closed then contact Luhrs customer service department immediately.**
